AYVEDE

Website Health Check

Fernhill Roofing Co.

Website: https://ayvede.pages.dev/demo/
Report date: 2026-11-10 | Pages checked: 1
Run: 2026-11-10 01:09:33 UTC to 2026-11-10 01:09:49 UTC

SAMPLE REPORT. This is a sample run on the demo site of a fictional company, Fernhill Roofing Co. It is not about a real business. The phone number and email used for the comparison in item 8 are made up for the sample.

> Ayvede LLC is run by one owner. Our sites, reports and emails are built and written by AI (Claude, made by Anthropic). Routine emails and reports are sent by the AI without the owner reading each one first. No client site is published without the owner's approval.

This report lists what we observed on 2026-11-10 using automated checks of public pages. It is not a security audit, penetration test, legal review, or accessibility certification. Results are a snapshot of that date. We do not guarantee rankings, calls, or leads.

8	0	1
Pass	Fail	Could not check

Results

#	Check and method	Result	Evidence
1	**HTTPS certificate is valid and not expired** Method: TLS handshake to port 443 with certificate and hostname verification (Python ssl, default trust store).	Pass	Certificate verified for ayvede.pages.dev. Issued by Let's Encrypt. Expires 2027-02-07 (89 days from 2026-11-10). Protocol TLSv1.3. Checked 2026-11-10 01:09:34 UTC
2	**Plain http address redirects to https** Method: GET the http:// version of the address without a browser, following up to 5 redirects by hand, reading the final address.	Pass	Chain: http://ayvede.pages.dev/demo/ [301] -> https://ayvede.pages.dev/demo/ [200] Checked 2026-11-10 01:09:35 UTC
3	**Mobile viewport tag is present** Method: Read the HTML of each page for a meta viewport tag with a width setting.	Pass	Viewport tag found on all 1 page(s) read. Checked 2026-11-10 01:09:38 UTC
4	**Phone number is a tap-to-call link** Method: Read each page for <a href="tel:..."> links and for phone numbers in the visible text.	Pass	5 tel: link(s) found, for example tel:+12155550142 on /demo/. Checked 2026-11-10 01:09:38 UTC

#	Check and method	Result	Evidence
5	**A contact or quote form exists** Method: Read each page for <form> elements with visible input fields and for embedded form services.	**Pass**	A form with 4 field(s) found on /demo/. Checked 2026-11-10 01:09:38 UTC
6	**Links on the checked pages work** Method: HEAD request to each unique link (GET if HEAD is refused), one request per second. 404, 410 and server errors on same-site links count as broken. Refusals, timeouts and blocks count as unknown, never as broken.	**Could not check**	1 unique link(s) checked: 0 working, 0 broken, 1 unknown. Unknown means the other site refused or did not answer an automated request. Checked 2026-11-10 01:09:38 UTC
7	**Mobile speed (Lighthouse lab run)** Method: One Lighthouse run, mobile form factor, performance category only (npx --yes lighthouse@13.6.0 <url> --only-categories=performance --form-factor=mobile --output=json --chrome-flags=--headless=new --quiet). Lab measurement, not a ranking predictor.	**Pass**	Performance score 98 out of 100, band good (90-100). First Contentful Paint 1.9 s, Largest Contentful Paint 1.9 s, Total Blocking Time 0 ms, Cumulative Layout Shift 0.028, Speed Index 1.9 s. Lighthouse 13.6.0, run 2026-11-10 01:09:49 UTC. Checked 2026-11-10 01:09:49 UTC
8	**Contact details match the details you gave us** Method: Compared the phone number, email address and business name you gave us with the text and tel:/mailto: links on the pages read.	**Pass**	Phone you gave us appears on the site. Business name you gave us appears on the site. Checked 2026-11-10 01:09:38 UTC
9	**Page titles and footer year** Method: Read the <title> of each page and any copyright year in the visible text.	**Pass**	Home page title: "Fernhill Roofing Co. | Philadelphia rowhome roofs (concept site)". No copyright year shown on the pages read. Checked 2026-11-10 01:09:38 UTC

What to fix first

Ranked in the order we suggest. Each item says who can do it.

No item failed in this run, so there is nothing to rank.

Items we could not check

These are not failures. The check could not be completed, for the reason shown.

- **Links on the checked pages work.** 1 unique link(s) checked: 0 working, 0 broken, 1 unknown. Unknown means the other site refused or did not answer an automated request.

What each check looks at

1. **HTTPS certificate.** The certificate is what lets a browser show your site without a warning. We connect the way a browser does and see whether it accepts the certificate, and when it expires. Rerun on delivery day.
2. **http to https.** Someone who types the address without the s should end up on the https version. We request the http address and follow where it sends us.
3. **Mobile viewport tag.** A line in the page code that tells a phone to fit the page to the screen. Without it, a phone can show a shrunken desktop page.
4. **Tap-to-call.** A phone number that is a link starting with tel:, so a tap on a phone starts the call.
5. **Contact or quote form.** A form on the page, or an embedded form from a form service, that a visitor can fill in.
6. **Links.** We ask each link on the pages read whether the page behind it exists. Other sites that refuse automated requests are marked unknown, not broken.
7. **Mobile speed.** One Lighthouse run on the home page with a simulated phone. The numbers are a lab measurement on the date shown. They vary from run to run.
8. **Contact details.** The phone, email and business name you gave us compared with what the pages show.
9. **Titles and footer year.** Every page has a title, and a copyright year in the footer, if there is one, is not out of date.

How to read the results

- **Pass** means the check found what it looks for on the pages read, on the date shown.
- **Fail** means the check ran and did not find it. The evidence column says what was seen.
- **Could not check** means the check could not be completed, for example because the site blocks automated requests or did not answer within 20 seconds. It is never counted as a failure.

A page that builds its content with a script after it loads may show less to this tool than it shows to a visitor. If an item looks wrong to you, tell us and we will look again.

Pages and scope

Pages read for this report (home page plus up to 10 pages in total on the same site):

- https://ayvede.pages.dev/demo/ (HTTP 200, read 2026-11-10 01:09:34 UTC)
- robots.txt was read and obeyed for same-site requests.
- 1 same-site page(s) skipped because robots.txt disallows them.

Method and dates. Every check above shows its own method and the UTC time it ran. Requests were made by an automated tool identifying itself as AyvedeHealthCheck/1.0: GET and HEAD only, one request per second, 20 second timeout, 5 requests in total. Public pages only. No logins, no vulnerability scanning, no load testing. A site that blocks automated requests is marked Could not check, never Fail. Speed numbers are lab measurements on the date shown and are not a ranking prediction.

This is not a security audit, penetration test, legal review, or accessibility certification.
